The Site Walk - a sheet to carry

For: the Launch Pad studio room, before the access statement publishes. **Fills:** the `[PENDING SITE WALK]` section of `launch-pad-access-statement-v0.1-DRAFT.md`, and picks the designated quiet space that `2027-2028-launch-pad-coach-not-therapist-referral-pathway-v0.1.md` has owed since it was written. **Takes:** about half an hour. **Status:** v0.1, 2026-09-28.

Before you go

Bring: a tape measure, your phone, this sheet, a pen.

The one tip that finds the most in the least time: push the pram through the whole route, from where a family parks to the chair you would sit in. A pram is not a wheelchair, but it finds thresholds, narrow doors, tight corners and heavy doors in about four minutes, and your hands are full the same way.

The rule this walk runs under. This is not a compliance audit and nobody is grading the building. The job is to write down what is true so the statement can say it plainly. A family reading "there is one step at the front door, and here is how we get around it" can decide for themselves. A family reading nothing has to guess, and the ones who guess wrong just never come back.

The reference numbers below are the common accessible minimums, given so a measurement means something. They are reference points, not a verdict. Whether any of them legally bind a private program in Idaho is a question for counsel, and it rides with the bundle already going there.

The third column is the important one. Plenty of what you find will be cheap to change: move a table, prop a door, add a lamp, swap a chair. Knowing which is the difference between "we cannot" and "we have not yet."

Part 1 - Getting there

Check	Reference	What is true	Fixable? How?
Parking or drop-off to the front door: any steps?	step-free, or a ramp		
Surface along that route (gravel, grass, broken concrete)	firm and even		
Distance from drop-off to the door	shorter is better; note it		
Front door: clear opening when fully open	32 in		
Front door: heavy? Does it need two hands?	openable one-handed		
Threshold lip at the front door	under 1/2 in		

Part 2 - Getting to the room

Check	Reference	What is true	Fixable? How?
Any stairs between the front door and the studio room	step-free		
Narrowest point of the hallway	36 in		
Studio room door: clear opening	32 in		
Studio room door threshold	under 1/2 in		
Anything stored in the hallway that narrows it			

Part 3 - The room itself

Check	Reference	What is true	Fixable? How?
Can a wheelchair get to the circle	36 in path, 60 in to turn		
Can a wheelchair get to the Table, and sit at it	~27 in knee height, ~30 in wide		
Can a wheelchair reach the agreements wall			
Is there a seat that is not the floor for every floor activity			
Where does the low-sensory seat actually go	away from the door and the noisiest wall		
Room for the Constellation with a seated path through it			
Range of seating: hard chair, soft chair, standing, floor	at least three		

Part 4 - The bathroom

Check	Reference	What is true	Fixable? How?
Same floor as the studio room			

Check	Reference	What is true	Fixable? How?
Distance from the room	note it		
Door: clear opening	32 in		
Door: can it be managed one-handed, and does it latch			
Turning space inside	60 in circle		
Grab bars	present or not		
Sink: can it be reached seated			
Is it a single room or a multi-stall	single is easier for many people		
Is there a gender-neutral option			

Part 5 - The quiet space (pick it, do not just check it)

The referral pathway requires a designated quiet space, named and prepared before opening. A real room or corner, never a hallway. This walk is where it gets chosen.

Check	What is true
Where is it	
Can a learner reach it without crossing the whole room or asking permission	
Can it be reached by someone using a mobility aid	
Can you see the main room from it, or get back fast	
Is it quiet when Tots is running on Mon and Wed	
Does it have a door, a curtain, or nothing	

Check	What is true
What does it need: a chair, a lamp, a blanket, a sign	

Part 6 - Light, sound, air

Check	What is true	Fixable? How?
Fluorescent overheads, and can they be turned off		
Can the light be dimmed, or is it all or nothing		
Natural light, and can it be blocked		
What is adjacent on Tue and Thu mornings, and how loud		
What is adjacent on Mon and Wed while you are in Tots		
Can the room be quieted (door closed, rug, soft surfaces)		
Echo: clap once. Ringing or dead?		
Smell: cleaning products, food, damp		
Temperature control, and who holds it		

Part 7 - Getting out in an emergency

Check	What is true	Fixable? How?
Nearest exit from the studio room		
Is that exit step-free		
Is it ever locked or blocked		
Second way out		

Check	What is true	Fixable? How?
Where does everyone gather outside		
Could you get seven learners plus a worn baby out		

Part 8 - Photos to take

So Chekov's read, Kira's read, and Jenna's review all happen without a second walk.

- [ ] The route from drop-off to the front door
- [ ] The front door, open
- [ ] The hallway at its narrowest
- [ ] The studio room, from the doorway
- [ ] The studio room, from the far corner
- [ ] The Table
- [ ] The bathroom door, open
- [ ] Inside the bathroom
- [ ] The quiet space
- [ ] The nearest exit

While you are in there (not access, but the same walk)

Things Day 1 needs placed, which you have to decide standing in the room anyway.

- [ ] Where the agreements wall goes (Two-Way Deal, Day 1)
- [ ] Where the dreams wall goes (Day 2, and it grows)
- [ ] Where the Year-Map and the Five-Region Dream Map hang
- [ ] Where the Constellation floor markers go, with the seated path

- [ ] Where the Stuck Protocol is posted, large and in the accessible layout
- [ ] Where the Table is, and whether you can sit at it seven-plus-one
- [ ] Where you put the baby down, if you need to

After the walk

1. Fill *The space* in the access statement from the third column, in plain sentences. Name the step, name the workaround.
2. Name the quiet space in the referral pathway, and list what it needs.
3. Anything in the "fixable" column that costs under an afternoon: do it, and the statement describes the fixed version.
4. Anything expensive: it goes in the statement as it is, honestly.
5. Send the photos and this sheet to Chekov for the Tier 1 read.

Measure it, write down what is true, and let the statement say it plainly. A named step with a workaround beside it is care. An unnamed step is a family finding out on the first morning.

"We evoke - we never extract."
